### Describe The Differences Among Solutions

Solutions . A solution is a homogeneous mixture of two or more components. The dissolving agent is the solvent. The substance that is dissolved is the solute. The components of a solution are atoms, ions, or molecules, making them 10<sup>-9</sup> m or smaller in diameter.

### Solutions, Suspensions, Colloids, and Dispersions

A solution is always transparent, light passes through with no scattering from solute particles which are molecule in size. The solution is homogeneous and does not settle out. A solution cannot be filtered but can be separated using the process of distillation. A suspension is cloudy and heterogeneous.
