Better known for audio books, Myanonamouse has a larger and friendly community with some strict rules.

### Timber Framing

Timber framing and "post-and-beam" construction are traditional methods of building with heavy timbers, creating structures using squared-off and carefully fitted and joined timbers with joints secured by large wooden pegs. If the structural frame of load-bearing timber is left exposed on the exterior of the building it may be referred to as half-timbered, and in many cases the infill between

Timber framing is an ancient building method that uses wooden joinery instead of metal brackets to connect the large posts and beams that form the frame of a structure. We use some of the strongest woodworking joints, including mortise and tenon, to frame our timber homes. The mortise is a cavity that is cut into a piece of wood.

With timber framing, heavy, large timbers frame the structure instead of more slender dimensional lumber (for example, 2 x 6's.). One of the most distinctive characteristics of a timber frame is the unique joinery that holds the timbers together. The ends of timbers are carved out so that they fit together like pieces of a puzzle.
